PUREPINE MOULDINGS

COMPANY PROFILE

Purepine Mouldings is the timber re-manufacturing operation of Pukepine Sawmills. The primary base of operation is located in the township of Te Puke, Bay of Plenty. Working as a complimentary operation alongside Pukepine Sawmills ensures that Purepine Mouldings has access to plantation grown Radiata pine that has been processed to their exacting standards to meet the wide range of products for both domestic and overseas clients.

Here at Purepine Mouldings we aim to deliver consistent top quality products by carefully managing every step of the process, therefore on-site our production processes include kilns for drying, equipment for grading, scanning and cut to length, band saw and planer options, finger-joint department along with painting systems for both water and oil based priming.

HOW TO USE THIS BROCHURE

- 1. The letters correspond to the profile name code. This example is Dressed 4 sides.
- 2. This number represents the profile size. The first two or three numbers always correspond to the profile WIDTH (eg 65 mm). The last two numbers always correspond to the profile THICKNESS (eg 19 mm).
- 3. Circle icons represent the grade of timber.
- 4. Square icons represent the timber finish.

GRADE AND FINISHING KEY

TIMBER GRADE

TW H3.2 Treated Wet KD H3.1 Kiln Dried

H3.1 Primed

| | |
|--|--|
| Finger Jointed Untreated Pine | Made from lengths of New Zealand Radiata Pine from which knots and other defects have been removed. Fingers are cut onto the pieces of timber and joined end to end with specialised glue. This creates a product that has superior strength, stability and greater overall length than the original pieces of timber. |
| Gesso/Primed Finger Jointed Pine | Pre-coated with a convenient specially developed primer designed to provide temporary protection during the installation process. Priming does not waterproof product so it's important to keep them dry at all times. |
| Clear Grade Pine | Clear timber is a premium grade, free of knots and blemishes on both faces and edges. Often used in high quality joinery, mouldings and furniture components. |
| Dressing Grade Pine | An appearance grade also referred to as furniture grade. For use where natural character is important. Features tight knots and small bark or resin pockets. Cone holes may be present in the occasional piece. |
| | |

IMPORTANT NOTICE TO ALL OUR CUSTOMERS

All our product is supplied kiln dried to an average 12% moisture content at the time of dispatch. Merchants and end users must ensure that care is taken to maintain the product in a dry environment at all times. Moisture uptake is easily detected by swelling between the joints in finger jointing and raised grain in finger jointing and clear profiles.

We do not warranty product that has become wet or damp for any reason, and is showing defects to the finished surface as described above.

A dry storage environment is also required for treated pre-primed product. Primer coats are not designed as a sealer coat but simply as a holding coat.

So remember — always store all Purepine Radiata Decorative Profiles out of the weather! Always store well supported either vertical or horizontal, and keep off the ground or floor.

GENERAL INFORMATION

- Mouldings available ex-stock as finger-jointed or clears are indicated in the brochure, other options in clears may be available on request.
- 2. Finger-jointed mouldings are 5.4m lengths. Pre-primed weatherboards and fascias are 6.0m lengths.
- 3. Clear and dressing grade products are supplied as random lengths.
- 4. All finger-jointed and untreated profiles are also available as H3.1 treated and/or pre-primed on request.
- 5. Always check with your local timber merchant if any minimum order quantity is required prior to ordering.
- 6. We recommend full adherence to manufacturers instructions when painting or staining installed products to achieve best finished results.

SPECIFIC INFORMATION

- Panelling profiles require certain fixing techniques to ensure durability. It is important that the following steps be taken to avoid movement of product:
 - 1. Product must be stored indoors and protected from direct sunlight.
 - 2. Seal all around before fixing.
 - Fix by face nailing using adequate nails and glue to all fixing surfaces. (Secret nailing may not be sufficient to stop all movement of product).
 - 4. Stain, polyurethane or paint.
- Purepine will provide whatever product the merchant specifies. However, no liability will be taken for incorrectly specified product.

PUREPINE TREATED AND PRE-PRIMED PRODUCTS

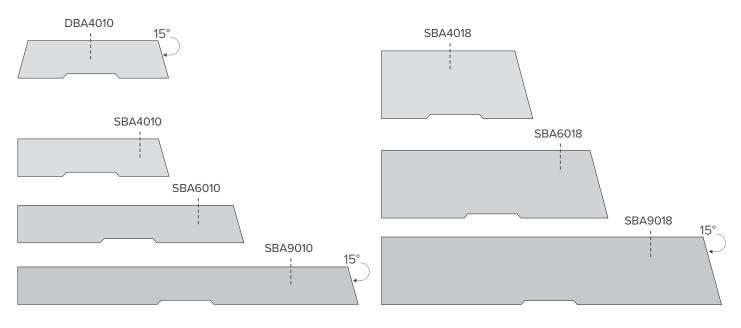

Purepine treated and pre-primed products are produced with a high level of care and expertise.

Our aim is to always be in the forefront with technology so along with traditional oil based primers we also run a high tech acrylic quick dry priming system with UV coating which provides an outstanding finish and is environmentally friendly.

All our finger-jointing products use PUR adhesives which are solvent free and once cured completely inert and toxicologically safe meaning a minimum impact on the environment and human health. All this while meeting structural wood adhesive rating in accordance with AS/NZS 4364 (Int):2007.

PRIMEWOOD FENCING

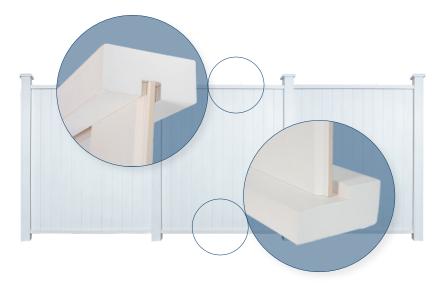

For a classic look and feel of traditional painted fences — Primewood.

Primewood fences add that traditional touch to a home, as well as providing privacy and security.

A solid privacy fence using the Shiplap or TGV profiles will add an extra touch of solitude to a home. This type of fence can also protect against harsh winds and distracting street noise.

Primewood machine finished palings represent a quality fencing option, they still have a classic, traditional appearance but they have a contemporary, smoother finish. The Primewood fencing range offer durability by combining a robust specification with quality materials that are supplied treated and primed ready for installation. PRIME/VOOD
